

JASPERS Excel tool for climate resilience assessment of small water and wastewater projects

Disclaimer

- The tools have been designed for small projects and are provided in good faith, to be used at the risk of the user under its responsibility.
- EIB Advisory JASPERS does not warrant the accuracy or completeness of the information and assessment performed with these tools nor does it assume any legal liability or responsibility, direct or indirect, for any damages or loss caused or alleged to be caused by or in connection with the use of or reliance on information contained in these tools.
- These tools have not been formally discussed or approved by the European Commission. The assessment resulting from the use of the tools does not necessarily state or reflect the views of the EIB Advisory JASPERS partners (European Commission and the European Investment Bank (EIB)).
- EIB retains copyright to these tools on behalf of EIB Advisory JASPERS. Permission to distribute these tools in whole for non-commercial purposes and without fee is hereby granted provided that EIB Advisory JASPERS is acknowledged.
- The tools perform a simplified likelihood analysis that considers the probability of experiencing the most severe hazard in the project location. They use an indicator-based approach for the characterisation of potential climate hazards and risks, that is simple albeit subjective. They rely on empirical evidence and hence can be applied by non-climate experts. They do not however entail the robustness of a quantitative risk analysis which evaluates losses on exposed elements using probabilistic metrics.
- The tools have been developed in MS Excel and they have not been tested in other spreadsheet applications so they might not work properly with other applications.
